

KS4 – Year 10 Long Term Mapping

Subject Intent/ Aims: Subject Intent/ Aims

Pupils will learn to develop knowledge, skills and understanding of mathematical methods and concepts. Pupils will learn how to acquire, select and apply mathematical techniques to solve problems, including the application of Mathematics in real life contexts. Content of the course is split into the following areas: Number, Algebra, Ratio and Proportion, Data Handling, Probability, and Shape, Space and Measure.

The qualification is assessed by three examinations (one non-calculator and two calculator), each examination is worth one third of the overall grade. Pupils will follow the Edexcel/OCR course in GCSE Mathematics.

Term	Foundation Tier Knowledge DfE Ref	Component	Composite	Higher Tier Knowledge	Higher Order Knowledge	Cross curricular links
Autumn 1	N2, N4, N6	Prime numbers	Recap and use the terms odd, even, prime, factor (Divisor), multiple, common factor, common multiple, square, cube and root.	N2	apply the four operations, including formal written methods, to integers, decimals and simple fractions (proper and improper), and mixed numbers – all both positive and negative; understand and use place value (e.g. when working with very large or very small numbers, and when calculating with decimals)	Multiplicative reasoning (e.g. recipes)
	N4, N6, N7	Prime numbers / Index Notation	Identify prime numbers. Use positive integer indices.	N3	recognise and use relationships between	Proportional reasoning (Science)

					operations, including inverse	
					operations (e.g. cancellation to	
					simplify calculations and	
					expressions); use conventional	
					notation for priority of	
					operations, including brackets,	
					powers, roots and reciprocals	
				N10	work interchangeably with	Conversion between
					terminating decimals and their	hours and minutes
			Express a whole number as a product of its prime factors, including using power notation.		corresponding fractions (such	(Science, PE)
	N4, N6	Prime numbers			as 3.5 and 7/2 or 0.375 or 3/8);	
					change recurring decimals	
					into their corresponding	
					fractions and vice versa	
				N4	use the concepts and	
					vocabulary of prime numbers,	
			Find the HCE and LCM of two		factors (divisors), multiples,	
					common factors, common	
	N4	(HCF) and Lowest	whole numbers by listing or		multiples, highest common	
		Common Multiple (LCM)	from their prime factorisations.		factor, lowest common	
					multiple, prime factorisation,	
					including using product	
					notation and the unique	
					factorisation theorem	
			Understand place value before	N12	interpret fractions and	Percentage change
	N15	Roundina	and after the decimal point.		percentages as operators	(Geography)
			Round answers to stated			
	N/4 5		decimal places.	-		
	N15	Rounding	Understand place value before	K9	define percentage as number	

		and after the decimal point. Round answers to stated significant figures.	of parts per hundred¿; interpret percentages and percentage changes as a fraction or a decimal, and interpret these multiplicatively; express one quantity as a percentage of another; compare two quantities using percentages; work with percentages greater than 100%; solve problems involving percentage change, including percentage increase/decrease and original value problems, and simple interest including in financial mathematics	
N14	Estimation	Estimate or check, without a calculator, the result of more complex calculations including roots. Use the approximate symbol appropriately.		Use of a calculator (Science)
N15, N16	Upper and lower bounds	Use inequality notation to write down an error interval for a number or measurement rounded or truncated to a given degree of accuracy. Apply and interpret limits of accuracy.		
N1, N2, N3, R9	Calculations with fractions. Fractions	Recognise and use equivalence between simple fractions and		Equivalence (Geography)

		of a quantity	mixed numbers. Order integers, fractions,			
			decimals and percentages.			
	N2, N8, N12, R3, R6	Calculations with fractions. Fractions of a quantity	Carry out complex fractional calculations using BIDMAS, including the use of mixed numbers, negative fractions and improper fractions. Calculate fractions of a quantity and express one quantity as a fraction of another.			
	N10, N2	Decimals and fractions	Express a simple fraction as a terminating decimal or vice versa, without a calculator. Understand and use place value in decimals. E.g. $0.4 = 2/5$ Use division to convert a simple fraction to a decimal.			Fractional reasoning (Science)
	N2	Division of decimals	Without a calculator, divide a decimal by a decimal.			
Autumn 2	N3, A1, A4	Collecting like terms. Simplifying products and quotients.	Simplify algebraic expressions by collecting like terms and expanding brackets. Simplify algebraic products and quotients. E.g. $2(a + 3b) = 2a + 6b$, $2a + 3a = 5a$, $a \times a \times a = a^3$, $2a \times 3b = 6ab$, $a^2 \times a^3 = a^5$, $3a^3 \div a = 3a^2$.[see also Laws of indices, 3.01c]	G1	use conventional terms and notation: points, lines, vertices, edges, planes, parallel lines, perpendicular lines, right angles, polygons, regular polygons and polygons with reflection and/or rotation symmetries; use the standard conventions for labelling and	

Department Planning 2024

					referring to the sides and	
					angles of triangles; draw	
					diagrams from written	
					description	
				G3	apply the properties of angles	
					at a point, angles at a point on	
					a straight line, vertically	
					opposite angles; understand	
			Expand products of two		and use alternate and	
		Multiplying out	binomials, where all terms are		corresponding angles on	
A1, A3, A4	A1, A3, A4	brackets	positive.		parallel lines: derive and use	
			E.g. $(x + 2) (x + 3) = x^2 + 5x + 6$		the sum of angles in a triangle	
				(e.g. to deduce and use the		
					angle sum in any polygon, and	
					to derive properties of regular	
					nolygons)	
				N6	use positive integer powers	
			Expand products of two		and associated real roots	
		Multiplying out	binomials, including negative		(square, cube and higher)	
	A1, A3, A4	hrackets	and complex algebraic terms.		recognise powers of 2, 2, 4, 5,	
		DIACKCIS	E.g. $(2x + 1) (x - 4) = 2x^2 - 7x - $		estimate powers and roots of	
			4		any given positive number	
			Decempion difference of two	N17	any given positive number	
			Recognise difference of two	IN 7	calculate with roots, and with	
A1, A3, A4	Multiplying out of	squares and perfect square		integer and fractional indices		
	A1, A3, A4	brackets Factorising	$E_{\alpha} = 2 - b^2 - (a + b)(a - b) - a^2 + b^2 - (a + b)(a - b) - b^2 + $			
		Diackets i actuitsing	$[-1.9, a - b] = (a + b)(a - b), a + b)^2$			
			$a^{2} - 2ab + b^{2} - (a + b)^{2}$			
	G17 G18	Circumference of a	$\frac{a - 2ab + b}{Becan} = (a - b)$	Ng	calculate with and interpret	Units of measure
	017,010			113	calculate with and interpret	

	circle	perimeter of rectilinear shapes and composite 2D shapes. Calculate the arc length of a sector of a circle given its angle and radius.		standard form A × 10 ⁿ , where 1 ≤ A < 10 and n is an integer	(PE)
G17, G18	Area of a circle	Recap area of triangles, quadrilaterals and composite 2D shapes. Know and apply the formula area = πI^2 to calculate area of a circle. Calculate the area of a sector of a circle given its angle and radius.	A8	work with coordinates in all four quadrants	
G16	Polyhedra	Calculate the surface area and volume of cuboids and other right prisms (including cylinders).	A10	identify and interpret gradients and intercepts of linear functions graphically and algebraically	Calculating amount of material required for a project (DT)
N8, G17	Pyramids, Cones and spheres	Calculate the surface area and volume of a pyramid (formulae will be given). Calculate the surface area and volume of spheres, cones and simple composite solids (formulae will be given).	A9	plot graphs of equations that correspond to straight-line graphs in the coordinate plane; <u>use the form y = mx + c</u> <u>to identify parallel</u> and perpendicular <u>lines; find the</u> <u>equation of the line through</u> <u>two given points or through</u> <u>one point with a given</u> <u>gradient</u>	
A3, A6	Algebraic terminology and	Recognise the difference between an equation and an	P6	enumerate sets and	

	proofs	identity, and show algebraic expressions are equivalent. Use algebra to construct arguments.		combinations of sets systematically, using tables, grids, Venn diagrams <u>and tree</u> <u>diagrams</u>	
A3, A5, A21, R10	Formulate algebraic expressions	Formulate simple formulae and expressions from real-world contexts. E.g. Cost of car hire at £50 per day plus 10p per mile. The perimeter of a rectangle when the length is 2cm more than the width.	Р9	calculate and interpret conditional probabilities through representation using expected frequencies with two-way tables, tree diagrams and Venn diagrams	Real life graphs (Science)
A2, A5	Substitute numerical values into formulae and expressions	Substitute positive or negative numbers into more complex formulae, including powers, roots and algebraic fractions.	G15	measure line segments and angles in geometric figures, including interpreting maps and scale drawings and use of bearings	
A4, A5	Change the subject of a formula	Rearrange formulae to change the subject, including cases where the subject appears twice, or where a power or reciprocal of the subject appears.			
G2	Perpendicular bisector. Angle Bisector	Construct the perpendicular bisector and midpoint of a line segment. Construct the bisector of an angle formed from two lines. Use geometric terms such as points, lines, line segments, vertices, parallel lines,			Scale drawing (DT)

			perpendicular lines, acute,		
			obtuse, reflex.		
			Construct the perpendicular		
			from a point to a line.		
		Perpendicular from	Construct the perpendicular to a		
	G2	a point to a line	line at a point. Know that the		
		a point to a inte	perpendicular distance from a		
			point to a line is the shortest		
			distance to the line.		
			Know formal names of		
			polygons, including special		
			types of triangles,		
			quadrilaterals, and regular		
			polygons up to eight sides.		
	G2	Loci	Recap ruler and compass		
			constructions to construct		
			figures and identify the loci of		
			points.		
			Understand the term		
			'equidistant'.		
			Apply constructions techniques		
			to solve real-world problems.		
	G2	Loci	Recognise where loci		
			represents 'equidistant' from		
			points or lines.		
	R2, G15 Maps and Scale	Recap angle rules to express			
		Maps and Scale	degrees of turn from North as a		
	,	drawings	3 figure bearing.		
		Maps and Scale	Use the scale of a map, and		
	R2, G15	drawings	work with bearings in order to		

			interpret scale drawings.			
	R2, G15	Maps and Scale drawings	Use the scale of a map, and work with bearings in order to construct simple scale drawings.			
	R2, G15	Maps and Scale drawings	sketches and written instructions using ruler and compass to solve real life problems			
Spring 1	S1	Populations and samples	Define the population in a study and understand the difference between population and sample. Understand what is meant by simple random sampling and bias in sampling.	A1	use and interpret algebraic manipulation, including: • ab in place of a × b • 3y in place of y + y + y and 3 × y • a ² in place of a × a, a ³ in place of a × a × a, a ² b in place of a × a × b • a/b in place of a ÷ b • coefficients written as fractions rather than as decimals • brackets	Sampling (Geography)
	S4, S5	Summary Statistics	Calculate the mode, median, mean and range for ungrouped data.	A3	understand and use the concepts and vocabulary of expressions, equations, formulae, <u>identities,</u> inequalities, terms and factors	
	S2	Categorical and	Design tables to classify data.	A4	simplify and manipulate	

	numerical data /	Review calculation of averages		algebraic expressions by:	
	Summary statistics	and range for ungrouped data		 collecting like terms 	
		presented in frequency tables.		 multiplying a single term 	
				over a bracket	
				 taking out common factors 	
				 expanding products of two 	
				or more <u>binomials</u>	
				 <u>factorising quadratic</u> 	
				expressions of the form $x^2 + bx$	
				+ c, including the difference of	
				two squares; factorising	
				quadratic expressions of the	
				form ax ² + bx + c	
				 simplifying expressions 	
				involving sums, products and	
				powers, including	
				the laws of indices	
			A17	solve linear equations in one	
	Catagoriaal and	Interpret multiple and composite		unknown algebraically	
60		of everages and renge for		(including those with the	
52	Summary statistics	undrouped data presented in		<u>unknown on both sides of the</u>	
	Ourninary statistics	bar charts		equation); find approximate	
				solutions using a graph	
		Interpret and construct Dia	A21	translate simple situations or	
Cotogoriant or	Catagorical and	Charte Review calculation of		procedures into algebraic	
S2	Categorical and	averages and range for		expressions or formulae;	
02	Summary statistics	undrouped data presented in		derive an equation (or two	
	Summary statistics	Pie Charts.		simultaneous equations), solve	
				the equation(s) and interpret	

				the solution	
S2	Categorical and numerical data / Summary statistics	Design tables to classify grouped data. Review calculation of averages and range for grouped data presented in frequency tables.	A19	solve two simultaneous equations in two variables (linear/linear or linear/quadratic) algebraically; find approximate solutions using a graph	
S4, S5	Summary Statistics	Find modal class, and calculate estimates of the range and median for grouped data, and understand why they are estimates.	A5	understand and use standard mathematical formulae; rearrange formulae to change the subject	
S4, S5	Summary Statistics	Calculate estimates for the mean of grouped data, and understand why they are estimates.			
N11, R4, R5, R6, R8	Equivalent ratios Ratios and fractions	Find simplified ratio of quantities in the form $a : b$ or in the form 1 : n , taking care to work with constant units of measurement. E.g. 50 cm : 1.5 m = 1 : 3 Interpret a ratio of two parts as a fraction of a whole.			
R5, R6, R8	Division in a given ratio Solve ratio and proportion problems	Split a quantity into two, three or more parts given the ratio of the parts. Solve simple ratio and proportion problems.			
R7, R10, R13	Direct proportion	Solve problems involving quantities in direct proportion			Proportion in recipes (DT)

		and recognising proportionality		
		constant.		
		Solve simple word problems		
		involving quantities in inverse		
		proportion or simple algebraic		
R10, R13	Inverse proportion	proportions.		
		E.g. speed - time contexts		
		where if speed doubles than the		
		time is halved.		
		Solve problems involving		
		quantities in inverse proportion		
R10, R13	Inverse proportion	and recognising proportionality		
		constant. Use proportionality		
		symbol and constant.		
		Recognise that if $y = k/x$, where		
R10, R13 Inverse pro	Inverse proportion	k is a constant, then y is		
		inversely proportional to x.		
	Direct and Inverse	Investigate contexts that lead to		
R10, R13	proportion	direct or inverse proportion from		
	proportion	a variety of contexts.		
		Plot scatter diagrams for		Finding connections
S6	Bivariate data	bivariate data, recognise types		in data (Geography)
		of correlation and draw a line of		
		best fit by eye.		
		Use a line of best fit to		
S6	Bivariate data	interpolate and extrapolate from		
		data, and be aware of the		
		limitations of these techniques.		
S6	Bivariate data	Recognise and interpret		
		correlation within the context of		

			the variables, and appreciate the distinction between correlation and causation.			
	S4	Outliers	in data from values (outliers) that do not 'fit'. Recognise outliers on a scatter graph.			
Spring 2	R9, N12	Percentage conversions Percentage calculations	Convert between fractions, decimals and percentages. Calculate percentage of a quantity, and express one quantity as a percentage of another, with and without calculator.	54	 interpret, analyse and compare the distributions of data sets from univariate empirical distributions through: appropriate graphical representation involving discrete, continuous and grouped data, including box plots appropriate measures of central tendency (median, mean, mode and modal class) and spread (range, including consideration of outliers, quartiles and inter-quartile 	
	R9, N12	Percentage change	Increase or decrease quantities by a simple percentage and express percentage change as a decimal or fractional multiplier. Apply this to percentage change problems	G9	identify and apply circle definitions and properties, including: centre, radius, chord, diameter, circumference, <u>tangent, arc,</u>	

		(including original value problems and simple interest).		sector and segment	
R9, R16	Growth and decay	Solve problems step-by-step involving multipliers over a given interval, for example further discounts of sales prices. Solve problems step-by- step involving increasing multipliers such as compound interest.	G10	apply and prove the standard circle theorems concerning angles, radii, tangents and chords, and use them to prove related results	Exponential growth (Science)
R9, R16	Growth and decay	Solve problems step-by-step involving multipliers over a given interval, for example further discounts of sales prices and depreciation.	Α4	simplify and manipulate algebraic expressions (including those involving surds and algebraic fractions), solving equations arising from algebraic fractions	
N6, N7	Index notation	Recap index notation E.g. $2 \times 2 \times 2 \times 2 = 2^4$			
N6, N7	Index notation	Use negative integer indices to represent reciprocals. Calculate with integer powers E.g. $2^{-1} = 1/2$, $2^{-3} = 1/8$			
N6, N7	Calculation and estimation of powers and roots	Calculate with integer powers and exact roots. E.g. 24 = 16, $\sqrt{9} = 3$, $\sqrt[3]{8} = 2$ Recognise simple powers of 2, 3, 4 and 5			
N7, A4	Laws of indices	Know and apply laws of indices. [see also Calculations with numbers in standard form,			

		3.02b, Simplifying products and quotients,6.01c]		
N9	Calculations with numbers in standard form	Interpret and order numbers expressed in standard form. [see also Laws of Indices, 3.01c]		Expression of large or small quantities (Science: solar distances, numbers of bacteria)
N9	Calculations with numbers in standard form	Convert numbers to and from standard form [see also Laws of Indices, 3.01c]		
N9	Calculations with numbers in standard form	Add and subtract big numbers expressed in standard form, without a calculator. [see also Laws of Indices, 3.01c]		
N9	Calculations with numbers in standard form	Add and subtract small numbers expressed in standard form, without a calculator. [see also Laws of Indices, 3.01c]		
A3, A17, A21	Linear equations in one unknown	Recap linear equations including those with the unknown on both sides of the equation.		
A3, A17, A21	Linear equations in one unknown	Recap linear equations including those with brackets and the unknown on both sides of the equation.		
N1, A3, A22	Symbols Inequalities in one variable	Understand and use the symbols < , >, ≥, ≤ and =. Represent inequalities on a number line using conventional notation of solid or open dots.		

N	N1, A3, A22	Inequalities in one variable	Solve linear inequalities in one variable, expressing solutions on a number line using the conventional notation.	24		
Summer I	G6, G20	Pythagoras' theorem	theorem to find lengths in right- angled triangles in 2D figures.	К4	reduction to simplest form	
(G6, G20	Pythagoras' theorem	Know and derive Pythagoras' theorem to find lengths in right- angled triangles in 2D figures.	R5	divide a given quantity into two parts in a given part:part or part:whole ratio; express the division of a quantity into two parts as a ratio; apply ratio to real contexts and problems (such as those involving conversion, comparison, scaling, mixing, concentrations)	
C	G6, G20	Pythagoras' theorem	Apply Pythagoras' theorem in other shapes. E.g. Recognise the diagonal of a rectangle is the hypotenuse etc.	R6	express a multiplicative relationship betweeb two quantities as a ratio or a fraction	
F	R9, N12	Percentage conversions Percentage calculations	Convert between fractions, decimals and percentages. Calculate percentage of a quantity, and express one quantity as a percentage of another, with and without calculator.	R7	understand and use proportion as equality of ratios	
F	R9, N12	Percentage change	Increase or decrease quantities	R8	relate ratios to fractions and to	

		by a simple percentage and express percentage change as a decimal or fractional multiplier. Apply this to percentage change problems (including original value problems and simple interest).		linear functions	
R9, R16	Growth and decay	Solve problems step-by-step involving multipliers over a given interval, for example further discounts of sales prices. Solve problems step-by- step involving increasing multipliers such as compound interest.	G20	know the formulae for:Pythagoras' theorem $a^2 + b^2 =$ c^2 , and the trigonometricratios, sin $\theta =$ opposite/hypotenuse, cos $\theta =$ adjacent/hypotenuse and tan $\theta =$ opposite/adjacent applythem to find angles andlengths in right-angledtriangles and, where possible,general triangles in two andthree dimensional figures	
R9, R16	Growth and decay	Solve problems step-by-step involving multipliers over a given interval, for example further discounts of sales prices and depreciation.	G21	know the exact values of sin θ and cos θ for θ = 0°, 30°, 45°, 60° and 90°; know the exact value of tan θ for θ = 0°, 30°, 45° and 60°	
N6, N7	Index notation	Recap index notation E.g. 2 x 2 x 2 x 2 = 2^4	G16	know and apply formulae to calculate: area of triangles, parallelograms, trapezia; volume of cuboids and other right prisms (including	

				cylinders)	
N6, N7	Index notation	Use negative integer indices to represent reciprocals. Calculate with integer powers E.g. $2^{-1} = 1/2$, $2^{-3} = 1/8$	G17	know the formulae: circumference of a circle = $2\pi r$ = πd , area of a circle = πr^2 ; calculate: perimeters of 2D shapes, including circles; areas of circles and composite shapes; <u>surface area and</u> <u>volume of spheres</u> , <u>pyramids</u> , cones and composite solids	
N6, N7	Calculation and estimation of powers and roots	Calculate with integer powers and exact roots. E.g. 24 = 16, $\sqrt{9} = 3$, $\sqrt[3]{8} = 2$ Recognise simple powers of 2, 3, 4 and 5	G18	calculate arc lengths, angles and areas of sectors of circles	
N7, A4	Laws of indices	Know and apply laws of indices. [see also Calculations with numbers in standard form, 3.02b, Simplifying products and quotients,6.01c]			
N9	Calculations with numbers in standard form	Interpret and order numbers expressed in standard form. [see also Laws of Indices, 3.01c]			
N9	Calculations with numbers in standard form	Convert numbers to and from standard form [see also Laws of Indices, 3.01c]			
N9	Calculations with numbers in standard form	Add and subtract big numbers expressed in standard form, without a calculator. [see also			

			Laws of Indices, 3.01c]		
	N9	Calculations with numbers in standard form	Add and subtract small numbers expressed in standard form, without a calculator. [see also Laws of Indices, 3.01c]		
Summer 2	G3, G6	Angles at a point / Angles on a line	Know and use the sum of the angles at a point is 360° and that the sum of the angles on a line is 180°	recognise, sketch and interpret graphs of linear functions, quadratic functions, simple <u>cubic functions</u> , the reciprocal function $y = 1/x$ with $x \neq 0$, exponential functions $y = k^x$ for positive values of k, and the trigonometric functions (with arguments in degrees) y = sin x, y = cos x and y = tan x for angles of any size	
	G3, G6	Angles between intersecting and parallel lines	Know and use; Vertically Opposite Angles are equal, Alternate Angles between parallel lines are equal, Corresponding Angles between parallel lines are equal.	know and apply the sine rule a/sin A = b/sin B = c/sin C , and cosine rule a ² = b ² + c ² – 2bc cos A, to find unknown lengths and angles	
	G3, G6	Angles at a point / Angles on a line / Angles between intersecting and parallel lines	Apply angles on a line to find angles in rectilinear figures. Use standard conventions for labelling and refering to sides and angles.	know and apply Area = 1/2 ab sin C to calculate the area, sides or angles of any triangle	
	G3, G6	Angles at a point / Angles on a line / Angles between	Apply angles properties to justify results in simple proofs. e.g. The sum of the interior		

	intersecting and parallel lines	angles of a triangle is 180°.		
G3, G6	Angles in polygons	Derive and use the sum of the exterior angles of a polygon is 360°		
G3, G6	Angles in polygons	Find and apply the sum of the interior angles of a polygon to find missing angles in irregular and regular polygons.		
G4, G6	Properties of a triangle	Use basic properties of isosceles, equilateral, and right angled triangles to find lengths and angles in rectilinear figures and in simple proofs.		
G4, G6	Properties of quadrilaterals	Use basic properties of quadrilaterals to find lengths and angles in rectilinear figures and in simple proofs.		
N13, R1, G14	Units of measurement	Use and convert standard units of measurement for length, area, volume/capacity, mass, time and money		
N13, R1, G14	Units of measurement	Use and convert standard units in algebraic contexts.		
N13, R1, R11, G14	Compound units	Use and convert compound units (e.g. speed, rates of pay, unit pricing, density, pressure).		
N13, R1, R11, G14	Compound units	Use and convert compound units in algebraic contexts. E.g. If distance is 4 <i>x</i> and time is 2 <i>y</i>		

SMSC	British Values	RSHE	Assessment
Cultural: As part of enrichment activities, students will investigate the uses of symmetry and Art in Rangoli and Islamic art. Statistical analysis of data that will enable students to understand results and representations of data in the news. Spiritual: Investigating the Fibonacci sequence. Using the findings to link to other curriculum areas e.g. the natural world.	 Democracy. Use of proportion, ratio, fractions decimals and percentages to describe 'fairness'. Outside speaker delivering a two interactive sessions to key year groups on financial education. One session to ensure students understand the concept of credit and savings, the second to practice how to budget in later life as an adult. The rule of law. Interpreting and analysing the accuracy of statistics. Does proportional representation in the UK electoral system ensure a 'fair' result? 	Moral. Examples of the moral development in mathematics include: • The trip to Bletchley Park shows the work that mathematicians contributed in WWII to help stop the spread of the Nazi ideals, and help the allies win the war. Discussions to take place about Turin, his ideas and how and why he was persecuted due to his sexuality? • History of Maths day for year 7 to show the role of males and females in the development of mathematics through the ages. Social: Participation in the UKMT Team Maths challenges across the year group. Participation in regional competitions pending performance. The art of origami and it's links with mathematics.	Summative Homework tasks to assess understanding in each area of the curriculum. Half termly assessments to measure progress and areas for improvement in topics covered so far. End of year examination covering all content. Formative Frequent WWW/EBI feedback from the class teacher. Self/peer/teacher 'live' marking during lessons to adapt content during a lesson to keep the

level of challenge high.

Adapted Curriculum Content: Lower ability: Recap and use the terms odd, even, prime, factor (Divisor), multiple, common factor, common multiple, square, cube and root. Higher ability: change recurring decimals into their corresponding fractions and vice versa	Adapted Curriculum Content: Lower ability: Calculate the mode, median, mean and range for ungrouped data. Higher ability: calculate and interpret conditional probabilities through representation using expected frequencies with two-way tables, tree diagrams and Venn diagrams	Adapted Curriculum Content: Lower ability: Know and derive Pythagoras' theorem to find lengths in right-angled triangles in 2D figures. Higher ability: apply and prove the standard circle theorems concerning angles, radii, tangents and chords, and use them to prove related results
Adaptive Implementation Practices:	Adaptive Implementation Practices:	Adaptive Implementation Practices:
